FAQ's

How do I find my G spot?

Everyone's G-area is different. But to find your G spot, insert Gasp with the rounded head facing the front wall of the vagina. Then, take some time to play with the different pulsation modes to discover if one area is more sensitive than others. You'll know when you've found it.

Why the unique shape of the G-spot vibrator?

G spot vibrators are designed to target a specific area on the front wall of the vagina – something that a straight-shaped vibe wouldn't be able to do. Gasp has a rounded head and an angled neck to make finding (and stimulating) your G spot easier than ever.
